Speaker and Workshop References

Parent-child connectedness and communication in relation to alcohol, tobacco and drug use in adolescence: An integrative review of the literature

This integrative review of the literature was conducted to examine which elements of parent-child connectedness and substance-use specific communication are effective across adolescent alcohol, tobacco and drug use

Hannah Carver, Lawrie Elliott, Catriona Kennedy & Janet Hanley (2017)

Parent-child connectedness and communication in relation to alcohol, tobacco and drug use in adolescence: An integrative review of the literature, Drugs: Education, Prevention and Policy, 24:2, 119-133, DOI: 10.1080/09687637.2016.1221060

Process Evaluation of Alcohol Brief Interventions in Wider Settings (Young People and Social Work)

This study aimed to explore the feasibility and acceptability of ABIs delivered to young people and in social work settings. The study did not aim to examine whether individuals who received ABIs changed their drinking behaviour and improved their health but did explore how feasible a future outcome evaluation of ABIs in these settings would be, and the issues and challenges which would be involved in such a study.
